

Information Brief

Process Automation for Accounts Payable Document Input - Workflow - Storage

By Jochen Hager

Accounts payable automation significantly reduces accounts payable costs and improves cash flow visibility by reducing labor costs, shortening cycle times, increasing early payment discounts, reducing non-value added processing, and providing real-time analyses of all current and historical invoices, their status and bottlenecks. Combined with your specific document input methods (scanning, e-invoicing, fax and/or e-mail) and complemented with an SAP® certified storage product, it generates a complete solution for all your accounts payable process automation needs.

Save time and money with SAP® Accounts Payable Automation and Archiving Solutions!

AP Workflow with Norikkon APay™ Suite

Invoice management is one of the most time consuming and costly tasks for any company. Studies show that the significant pain-points include: missed discounts, exception handling, lengthy cycle time, lost or misplaced invoices, and lack of visibility and control. Norikkon's APay Suite,

- ▶ **Personalized Services**
- ▶ **Effective Solutions**
- ▶ **Guaranteed ROI**
- ▶ **Exceptional Quality**

Accounts Payable (AP) automation for SAP® eliminates the pain. Our APay Suite solution is fully functional out-of-the-box or customizable to meet your specific requirements.

APay Suite provides a powerful application environment in SAP® for an organization to process invoices in the most efficient way possible by bringing all the pieces together. It also serves as a management tool to monitor invoices and invoice

workloads inside and outside of SAP®. In addition, it provides accurate real-time analyses of invoice cycles and status, not to mention cash flow. APay Suite, is comprised of APay Ledger, APay Center, APay Mail, APay Vendor Notification, and APay Portal.

Storage with KGS ContentServer4Storage

The KGS ContentServer4Storage is an HTTP-server for SAP®. As a Java application it can run on any platform (Windows, Unix, Linux,...). It provides a full integration with different storage- and HSM solutions, already deployed in companies: the existing storage infrastructure can be used more extensively. Because of its simple and universal technology, it requires very little special system knowledge to support it and is ideal for any outsourcing scenario or centralized management.

The archiving of original documents supports functional requirements of the business, e.g. the

easy and fast access to the original documents from the business context.

“Our goal is to bring first class business automation solutions that offer truly exceptional business value to our clients in the US. One satisfied client at a time“

Kristin Gerling
Man. Partner SolutionXchg

KGS ContentServer4Storage is both ArchiveLink™ 6.20 (incl. load test) and SAP® Information Life-cycle Management certified.
