

ContentServer4Storage

SAP® Certified
Integration with SAP NetWeaver®

Archiving either of data or documents is a mayor requirement in most SAP environments and plays an important roll in many SAP projects.

Document archiving is a compliance need and supports the business. Clerks are able to retrieve original documents within the business context from the transactions they work with. Data Archiving is necessary for securing system performance by taking data in the SAP databases and storing it offline.

KGS ContentServer4Storage is not only **SAP ArchiveLink® 6.20 (including Loadtest)** but also **SAP Information Lifecycle Management (BC-ILM2.0)** certified. It is the best available solution for both requirements on the market.

KGS ContentServer4Storage has been especially developed to satisfy the requirements of SAP archiving. It is a unique solution in this field able to cope even with highest performance requirements.

There are no additional clients needed on the SAP side, even the view uses SAP standard viewing functionality. The whole systems is based 100% on SAP standards. No additional roll outs are required. For document viewing the integrated document viewer is used. All users gain easy access to document management, as they stay in the context of the application they are used to.

Beside the deep integration into the SAP landscape the **KGS ContentServer4Storage** is also fully integrated into the different storage and HSM solutions.

Existing storage infrastructure will be used more efficiently. For archiving no special or proprietary hardware is needed.

KGS ContentServer4Storage server components are designed to run on every hardware and also on every operating system.
